Description:

Portrait of Marcel Duchamp at the age of 13, just before his work began to be conceived.

These two portraits are strictly identical, no deviation, and yet the eye detects or invents differences. Tiny psychological differences seem to be revealed, a determined look at one, more tender on the other, or the reverse.

Marcel and Rose in an infra-thin separation.

Collection Macval, ville d'Ivry, France

The series "Double portrait" was the subject of an installation composed of 90 slides projected from a carousel on 3 successive screens made of transparent veils. This work has integrated the collections of the MNAM, Centre Pompidou in 2023.
